Customer Journey Map

Date	29 October 2026	**Team Name**	Harshika Jain
Team ID	EN25CS3010389	**Project Name**	Global Fuel Prices and Taxation Trends

Map the customer's experience stage-by-stage, capturing actions, touchpoints, thoughts, feelings, ownership, and improvement opportunities.

Phase of Journey	Stage 1: Find Data	Stage 2: Explore Dashboard	Stage 3: Interpret & Share
Actions — What does the customer do?	Opens the published fuel-price dashboard and reviews the available country/region data.	Uses charts, filters, and tooltips to compare petrol, diesel, LPG, and tax measures.	Reviews trends and comparisons, then summarizes findings for a report or presentation.
Touchpoint — What part of the service do they interact with?	Dataset description, Tableau Public workbook, and dashboard landing view.	Bar charts, line chart, map, tax comparison, filters, and tooltips.	Dashboard story points, chart captions, and published workbook link.
Customer Thought — What is the customer thinking?	“Is this dataset relevant and are the units clear?”	“Which countries or regions differ, and how do tax rates relate to prices?”	“What conclusions are supported by the charts, and what limitations should I mention?”
Customer Feeling — What is the customer feeling?	Curious, but may be unsure about data quality.	Engaged; may feel confused if charts are crowded or comparisons are inconsistent.	More confident when insights and limitations are clearly explained.
Process Ownership — Who is in the lead on this?	Project creator/data analyst.	Project creator/dashboard designer.	Project creator/analyst presenting the results.
Opportunities — How can we improve this stage?	Clearly state the source, date range, units, and data limitations.	Use consistent colors, readable labels, sensible averages, and useful filters.	Highlight key findings, avoid causal claims from correlation, and provide a concise conclusion.
