Scalability & Future Plan

Date	28 October 2026
Team Name	Harshika Jain
Team ID	EN25CS3010389
Project Name	Global Fuel Prices and Taxation Trends
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Dataset is loaded manually and is not updated automatically	Fuel prices can become outdated	High
2	Only petrol, diesel, LPG, crude oil and tax data are included	Cannot fully explain why prices differ (no inflation or currency data)	Medium
3	Tableau Public makes the dashboard and data public and has size limits	Not suitable for private or very large datasets	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Dashboard is shared through a Tableau Public link for a small audience	Move to Tableau Cloud or Server to support more users with controlled access
2	Data Storage	Single dataset file connected to Tableau	Store data in a cloud database with scheduled refresh
3	Performance	Dashboard responds well for the current data size	Use data extracts, pre-aggregation and fewer filters for larger data
4	Security	Public dashboard with no sensitive data	Add login and role-based access if private data is used

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Automatic data refresh from fuel price sources	1 to 2 months	Always up-to-date insights

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 3	Add inflation, exchange rate and subsidy analysis	3 to 4 months	Better explanation of price differences
Phase 4	Price forecasting and a mobile-friendly dashboard	5 to 6 months	Helps planning and reaches more users
