Ideation Phase

Empathize & Discover — Empathy Map Canvas

Date	29 October 2026	**Team Name**	Harshika Jain
Team ID	EN25CS3010389	**Project Name**	Global Fuel Prices and Taxation Trends

Target User

A student, researcher, or analyst who wants to understand and communicate differences in fuel prices and taxation across countries.

SAYS	THINKS
“I want to compare fuel prices across countries.” “I need charts that are easy to understand.” “I want to know whether tax rates relate to fuel prices.”	Which countries or regions have higher or lower prices? Are comparisons fair if there are different numbers of records per country? What other factors might affect fuel prices?
DOES	FEELS
Looks at country, region, date, petrol, diesel, LPG, crude oil, and tax fields. Uses filters and charts to compare groups and trends. Checks labels, units, and missing values.	May feel confused when data is scattered or charts are crowded. Wants confidence that calculations and comparisons are correct. Feels more confident when results and limitations are clear.

PAINS

• Difficulty comparing fuel prices across multiple countries and regions.
• Risk of misleading comparisons when aggregation, units, or date ranges are inconsistent.
• Difficulty understanding taxation without considering subsidies and other influences.

GAINS

• One interactive dashboard with clear charts and filters.
• Easier comparison of petrol, diesel, LPG, and fuel tax measures.
• A clear summary of observed patterns and limitations.
