Customer Problem Statement Template

These statements describe information needs for people comparing fuel prices. They are framed as user problems, not as claims that the dashboard changes fuel prices.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A researcher, student, or analyst comparing fuel markets.	Understand how petrol and diesel prices differ across countries and regions.	Fuel-price information may be spread across records and difficult to compare consistently.	Prices need to be viewed by country, region, and time using consistent measures.	Unsure which differences are meaningful and how to explain them clearly.
PS-2	A person studying fuel taxation and consumer prices.	Explore whether tax percentage is associated with petrol prices.	A price chart alone does not explain the possible role of taxation or other factors.	Subsidies, crude oil costs, transport, and other market conditions may also affect prices.	Concerned about drawing conclusions without enough context.

Design Opportunity

Create an interactive Tableau dashboard to compare fuel prices by country and region, examine changes over time, and explore the relationship between tax percentage and fuel prices. Present findings clearly and include limitations so users do not interpret association as proof of causation.
